BUFFAWAY™ POLISHES

BUFFAWAY™ GLAZE

BUFFAWAY™ GLAZE is designed to eliminate the smallest swirl marks that stubbornly remain after the final stage of polishing, or reappear after an aggressive wash. It is safe on all finishes including clearcoats, urethane, acrylic, Imron and fiberglass.

BUFFAWAY™ CUTTING COMPOUND

BUFFAWAY™ CUTTING COMPOUND is designed to tackle the toughest polishing jobs; old, faded paints, discolored RV's, rough boat hulls. It will remove heavy to light oxidation and bring the bright color of your old faded surface to it's original flawless shine. It's safe on all paints, including clearcoats, urethane, acrylic, imron, as well as fiberglass RV panels and boat hulls.

DIRECTIONS FOR **BUFFAWAY GLAZE OR CUTTING COMPOUND**

1. Wash surface with **BUFFAWAY ULTRAWASH**
2. Shake well
3. Apply sparingly to the finish to be polished
4. In small back and forth motions buff into the paint until all product is worked into the surface. If using a high-speed buffer, do not apply too much pressure.
5. Repeat until each section is restored to a high gloss.
6. Wipe off any excess powder with a clean cloth.

BUFFAWAY™ RUBBING COMPOUND

Specifically developed and manufactured by professional for professionals in the reinforced fiberglass industry.

DIRECTIONS

1. Thin compound to desired consistency
2. Apply compound to surface and use machine or by hand until surface is clean, dry and smooth.
3. To obtain an even higher luster, rebuff with one of our finer polishes or glazes.
